

WASTE HIERARCHY AND REDUCING YOUR WASTE FOOTPRINT

Let's make the world a better place by changing our lifestyle habits to minimize waste and recycle reusable materials. Doing so increases landfill capacity, saves energy, and reduces our carbon footprint.

1.

Prevent extra waste by source reduction. Purchase in bulk, buy cardboard or paper products, minimize excess packaging, and purchase necessities

2.

Recycle all plastics, cardboard, aluminum, and speciality items (electronics, gas, oil, batteries, lightbulbs)

3.

Backyard compost organic materials to use for garden or yard mulch

4.

Final disposal method is to throw materials in trash/landfill

MANAGE YOUR WASTE!

- Reuse items that can be repurposed
- Donate extra food to donation banks, local organizations, or homeless shelter
- Donate large furniture items and clothes to thrift stores
- Minimize single-use by using reusable bags, dish ware, containers, etc.
